

IABSE Future of Design London 2018

Young Designer's Competition:

Responses to Questions on the Brief

1. *"The structure could have a dynamic element, but should not use any external power supply." Just wanted to clarify whether no external power supply is referring to the dynamic element specifically, or the whole structure? For example, would an externally powered lift be allowed?*

[[16/08/2018]]

This refers to the dynamic element specifically, so that any dynamic element added purely for aesthetics can still be considered a sustainable solution to the brief. The recommendation against use of external power supplies is not considered to apply to more practical elements provided for accessibility etc.
